

Is regular testing really that important?

Investing in agricultural testing can help prevent crop failures and pathogen outbreaks from becoming unmanageable catastrophes. Performing regular maintenance testing gives you the insight you need to optimize nutrient recipes, refine production methods and grow consistently.

Why SGS ?

Proven Track Record

SGS has over 140 years of serving the global agricultural market, operating in Canada since 1948. Providing producers what they need to succeed.

Customer focus

We understand that every producer is different, one size does not fit all. We are here to work with you to determine the testing regimen that is right for you.

Fast service

We pride ourselves on quick turn around times and attentive, friendly customer service. When something goes wrong we are just a phone call away.

Pre-Season - Start Out Right

As we gear up for a new season, pre-season agricultural testing emerges as unsung hero. This initial assessment of growing media, nutrient levels, and crop compatibility sets the stage for success. Our producers benefit immensely from pre-season testing, guiding them to make informed crop-specific fertigation decisions.

Continuous Testing - Ensure success

Agricultural testing is crucial beyond planting season, serving as continuous support to ensure crop health. Regular monitoring helps prevent issues like pests, diseases, and nutrient imbalances, maintaining crop health and preventing yield loss.

Cost vs Value - What's the bottom line ?

In controlled environment agriculture, every inch of space counts. The financial impact of a crop failure caused by unseen deficiencies, pathogens, or fungal outbreaks can be devastating. Invest in agricultural testing today and ensure the continued success of your business. Because isn't your hard work worth it!
